International Payments **Interface**

When you need a simplified application for moving money around the world, Juniper Payments delivers with an intuitive and powerful solution. The *International Payments Interface* portal introduces a new standard for consolidating cross border payment processes for banks and credit unions while providing an opportunity for generating fee based revenue.

With our *International Payments Interface,* you no longer need to manage multiple logins to originate outgoing global transactions. Juniper has interfaced with trusted, top-tier 3rd party global exchange providers, to bring you a variety of exchange service options and real-time rate exchange information. Payment processes are streamlined by combining currency exchange rates, origination, and secure file transmission into one application. Once a rate is confirmed, our intuitive wizard based origination template guides you through each step of the payment process.

All payment information comes through one application providing centralized reporting and integrated printable disclosure statements that are designed to keep you in compliance and simplify daily operations.

As with all of Juniper Payments solutions, total system activity, audits and permission based functions are recorded and managed through an administration console for complete system control.

Enables Banks & Credit Unions

- Integrated disclosures
- Streamlined, straight through payment processing
- Quick, convenient and cost effective
- Reduce manual re-keying errors
- Complete disbursement control
